

CLOCK IN · SOLANA MOBILE HACKATHON

Isabella Ocean

Nine ad-free kids' games for the Solana Seeker

Stake 1 SOL to unlock, and get it back any time.
Or pay once.

Kids use their parents' Seekers. Nothing on the store is made for them.

121,069

activated Seekers: one on-chain Genesis Token per device

None

kids or family titles found on the dApp Store, which has no kids category

US\$35–90

a year: what parents pay elsewhere for ad-free kids' apps

Nine ocean games in one ad-free app

It started as a game for my 6-year-old daughter. She loves it, and she asked for the hard mode.

Isabella

20 levels: find the key, open the chest.

Bubble Party

Drag each sea creature home to its icon.

Shell Match

Find the pairs hidden in the shells.

Coral Maze

40 mazes, with keys and currents.

Sea Words

Picture word search, new every time.

Treasure Blocks

Slide and turn sea blocks to fill a row.

Sea Jigsaw

30 sea pictures in real jigsaw pieces.

Splash Dash

Tilt the phone to steer. 20 courses.

Sea Catch

Catch falling sea friends in her shell.

Eight are free

No ads

No accounts

No tracking

Plays offline

Eight games and World 1 are free. World 2 asks a grown-up.

Free: eight whole games, and the first 10 levels of Isabella the Mermaid.

Levels 11–20 of Isabella open when a grown-up unlocks them. Nothing else is paid.

A **parent gate** comes first: hold for 3 seconds, then solve a multiplication.

Two ways to unlock World 2

Unlock World 2

Levels 11–20 · for grown-ups

Stake 1 SOL

get it back any time

- You deposit 1.01 SOL, plus a tiny network fee.
- While it's staked, you give up its staking rewards (about 5% a year). They pay for the game.
- Your SOL's value still moves with SOL's price.
- Getting your SOL back locks World 2 again.
- Instant exit costs 0.3%. Free exit takes about 2 days.

Pay US\$4.99 once

any token

- One payment. No subscription.
- Pay with a token from your wallet. You see the exact amount before you approve.

The real screen. Every cost is spelled out before the wallet opens.

How stake-to-play works

We never hold the parent's SOL. The stake-pool program does, and only OCEAN holders can withdraw it.

1

Deposit

1.01 SOL goes into our pool, on Solana's standard stake-pool program.

2

Hold

The wallet receives about 1.01 OCEAN pool tokens. They stay in it.

3

Earn

The pool stakes the SOL. Its fee is 100% of the rewards: the game's price.

4

Exit

Withdraw any time: instantly for 0.3%, or free in about 2 days.

The app reads the wallet's OCEAN balance on chain. When the tokens leave, World 2 locks again.

Parents stay in control

The grown-ups screen: status, both exits, restore and disconnect.

Instant exit: about 1.007 SOL back in the wallet, and World 2 locks.

A stake unlock is re-checked on chain and lapses after 24 hours offline. A purchase never lapses.

Or pay once, in any token

Unlock World 2

Levels 11–20 · for grown-ups

**Stake 1 SOL**
get it back any time

- You deposit 1.01 SOL, plus a tiny network fee.
- While it's staked, you give up its staking rewards (about 5% a year). They pay for the game.
- Your SOL's value still moves with SOL's price.
- Getting your SOL back locks World 2 again.
- Instant exit costs 0.3%. Free exit takes about 2 days.

**Pay US\$4.99 once**
any token

- One payment. No subscription.
- Pay with a token from your wallet. You see the exact amount before you approve.

On devnet the demo charges 0.1 SOL in place of the US\$4.99 swap.

US\$4.99, once. No subscription.

Pay with SKR or any Jupiter-verified token.
Jupiter swaps it into exactly 4.99 USDC.

Reinstalled? Reconnecting the same wallet finds
the purchase on chain.

The yield pays for the game

~0.05 SOL

a year from each family that stakes 1 SOL (staking yields 4.8–5.5%)

US\$4.99

once, from each family that would rather pay

0%

dApp Store commission

Honest maths: the yield is small, and the parent gives it up while the SOL is staked. It's a hook for families who already hold SOL.

Built on Seeker rails

Native MWA

A Java Mobile Wallet Adapter bridge, with Seed Vault on a real Seeker.

SPL Stake Pool

Solana's audited pool program. The 100% fee is set on chain.

Jupiter + SKR

Any verified token in, SKR too. Exactly 4.99 USDC out.

No backend

The unlock is read from the chain. Progress stays on the phone.

Provable levels

Solvers prove every Isabella and maze level fair.

Tested end to end

Stake, exit and pay on a real Seeker and an emulator.

Splash Dash steers by tilt, using the phone's motion sensor.

It works today, on a real Seeker

The demo video (1:47), filmed on a real Seeker:

1. Nine games, and a Sea Jigsaw puzzle
2. Stake 1 SOL in Seed Vault: World 2 opens
3. Instant exit: SOL back, World 2 locks
4. Pay once: open for good

The real Seed Vault Wallet, through Mobile Wallet Adapter, on Solana devnet.

What's next

- 1 Mainnet: our own stake pool, then the dApp Store listing
- 2 More ocean games for ages 3–8, in the same app
- 3 Still no ads, no accounts, no tracking
